

**ABOUT ITC MICHIGAN:** ITC Michigan is composed of two operating companies: ITC Transmission and Michigan Electric Transmission Company (METC). Both are wholly-owned subsidiaries of ITC Holdings Corp. (ITC), the largest independent electricity transmission company in the U.S. The two systems comprise 8,700 circuit miles of transmission line serving most of Michigan's Lower Peninsula. Unlike traditional utilities, ITC focuses only on transmission, has no geographic constraints, and is independent from energy market participants. ITC therefore views the needs of the electric grid and its customers from a unique, holistic perspective.

**WHAT IS TRANSMISSION?** Transmission is the bulk delivery of electrical energy from power generating plants along high-voltage lines to the local distribution systems of utilities serving communities.

| AT-A-GLANCE:   | ITC Transmission                          | METC                      |
|--|---|---------------------------|
| Square miles of service territory                                      | ~7,600                                    | ~28,850                   |
| Transmission circuit miles   | ~3,100                                    | ~5,600                    |
| Transmission towers and poles  | ~18,700                                   | ~36,900                   |
| Voltage levels   | 120 kV to 345 kV                          | 120 kV to 345 kV          |
| System peak load   | 12,745 MW                                 | 9,469 MW                  |
| Stations and substations with ITC assets                               | 182                                       | 101                       |
| Capital investments since assets acquired                              | ~\$2.5 billion since 2003                 | ~\$1.7 billion since 2006 |
| Reduction in average number of outages on system since acquired by ITC | Down 48%                                  | Down 24%                  |
| Headquarters   | Novi, Michigan                            |                           |
| Top executive  | Simon Whitelocke, President, ITC Michigan |                           |

## KEY PROJECTS:

- **Apex-Phoenix** – A new 3-mile, 120 kV underground line that will support service reliability in the Ann Arbor area. Scheduled for completion second quarter 2019.
- **Beecher-Samaria** – Reconstruction of a 22-mile, 138 kV line in southern Michigan to improve service reliability by replacing the current wood H-frames and steel lattice structures with double-circuit steel monopoles. Scheduled for completion second quarter 2019.
- **Amber-Donaldson Creek** – Reconstruction of a 20-mile, 138 kV line in western Michigan to improve reliability. Scheduled for completion fourth quarter 2019.
- **Morocco Substation** – A new substation in Deerfield Township, Michigan. Completed in 2015.
- **The Thumb Loop** – A 140-mile, 345 kV line tracing Michigan's Thumb region, with four new substations. Phase 1 entered service in 2013, phase 2 in 2014, and the remainder entered service in May 2015. It serves as the backbone of a system designed to meet the identified maximum wind energy potential of the Thumb region while being an important link in the high-voltage transmission system in Michigan and the region.
