## Capital Project Profile: Beecher - Samaria Transmission Line Rebuild

ITC Michigan, through its Michigan Electric Transmission Company (METC) subsidiary, will rebuild approximately 22 miles of its Beecher - Samaria 138,000 volt (138kV) transmission line. This project will improve the reliability of high-voltage electrical service in the area by replacing the current wood H-frame and steel lattice structures with double-circuit steel monopoles. Construction is scheduled to take place in two phases: Morocco – Samaria in 2018 and Morocco – Beecher in 2019.

The Beecher – Samaria line rebuild is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high voltage transmission grid. The company has invested more than \$3.5 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

*The new Beecher - Samaria double-circuit monopoles will be similar to the one shown here.*

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
