Capital Project Profile: Bloomfield – Hamlin Transmission Line Rebuild

ITC Michigan, through its ITC *Transmission* subsidiary, is upgrading its approximately 4 mile, 120,000 volt (120 kV) Bloomfield – Hamlin transmission line that serves the Auburn Hills, Pontiac and Rochester Hills communities. This project will improve the reliability of high-voltage electrical service in the area by replacing the current 120kV double-circuit towers with 230 kV double-circuit monopoles.

Work will begin in January 2016 and is expected to be completed in June 2016. Segments of the Clinton River Trail will be temporarily closed during periods of construction.

The Bloomfield – Hamlin line rebuild is an example of ITC’s ongoing commitment to the operational efficiency and reliability of Michigan’s high voltage transmission grid. The company has invested approximately \$3 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

The new Bloomfield – Hamlin double-circuit monopoles will be similar to the one shown here.

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,600 circuit miles of high-voltage electric lines and 279 transmission stations and substations throughout Michigan’s Lower Peninsula. As the nation’s largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan’s transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
