## Capital Project Profile: Butters Substation Project

ITC Michigan, through its Michigan Electric Transmission Company (METC) subsidiary, will build a new substation, named Butters, in the City of Coldwater. It will connect to the existing Coldwater – Michigan Ave 138,000 volt (138 kV) transmission line. Substation construction is expected to begin in Q2 2020 and line construction will begin in Q3 2020. Both are expected and be completed in Q4 2020. Together with other recent transmission infrastructure improvements in the City of Coldwater, and in Coldwater, Girard and Union Townships, ITC's infrastructure investments are supporting greater reliability and economic growth in southern Michigan.

*The new Butters Substation will be similar to the one shown here.*

The Butters Substation Project is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high-voltage transmission grid. The company has invested more than \$4.7 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
