

CORKTOWN PROJECT

ITC Michigan, through its *ITC Transmission* subsidiary, is committed to serving customers and communities by providing safe, secure, reliable electricity transmission service to meet their needs.

In the City of Detroit, we are partnering with our customer, DTE Energy, to construct the new 120,000 volt (120 kV) Corktown Substation and a half mile of underground transmission line that will increase electricity capacity in this growing area of the city. Construction is expected to begin in Q2 2021 and be completed in Q4 2021.

The Corktown Project is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high-voltage transmission grid. ITC has invested \$5 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These Detroit infrastructure improvements represent a forward-looking approach that will improve the reliability of electric service to residents and businesses, and support current and future electricity demand throughout the region to drive growth.

ITC Holdings Corp., through subsidiaries *ITC Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
