

NITRO PROJECT

To support electric reliability in Southeast Michigan, ITC Holdings Corp., through its ITC *Transmission* subsidiary, will rebuild approximately 1.5 miles of its Baltic - Coventry 120,000 volt (120 kV) transmission line with new double-circuit monopoles, and will construct approximately 1 mile of new 120 kV transmission line to connect it to a new substation named Nitro in Northville Twp. Construction is expected to begin in Q2 2021 and be completed by Q4 2021.

ITC's approach to transmission line development takes into consideration the unique nature of every project. Projects are assessed individually for safety, reliability, cost-effectiveness, environmental impacts and community impacts to determine the best transmission solution for each project.

The Nitro transmission project is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high-voltage transmission grid. The company has invested more than \$4.7 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.

The new 120 kV monopoles will be similar to the one shown here.
