## Capital Project Profile: Delhi – Canal Jct. Transmission Line Rebuild

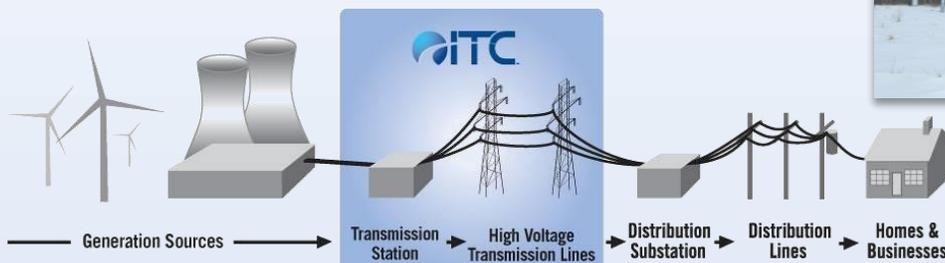

Portions of the electric transmission grid in Michigan, including many structures along the Delhi – Canal Jct. 138,000 volt (138kV) transmission line, were built more than 50 years ago and have experienced minimal investment since that time. As a result, this line had become increasingly unreliable and costly to maintain as growing demand for electricity and outdated infrastructure technology taxed its service capabilities, creating the potential for it to become overloaded.

The Delhi – Canal Jct. line spans Eaton and Ingham Counties, through the City of Lansing and into Windsor Township. ITC Holdings Corp., through its Michigan Electric Transmission Company, LLC (METC) subsidiary rebuilt approximately 7 miles of this line with new double-circuit structures and conductor (wires), providing greater reliability and capacity in this area of the state. Construction was completed in Q4 2019.

The Delhi – Canal Jct. line rebuild is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high voltage transmission grid. The company has invested more than \$4.7 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

*The new Delhi – Canal Jct. poles will be similar to the one shown here.*

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
