Capital Project Profile: Verona – Barnum Creek Jct. Transmission Line Rebuild

ITC Holdings Corp., through its Michigan Electric Transmission Company, LLC (METC) subsidiary, rebuilt approximately six miles of its Verona – Barnum Creek Jct. 138,000 volt (138 kV) transmission line in Calhoun County. The existing structures were replaced with new 230 kV double-circuit structures and conductor (wires), providing greater reliability in southwest Michigan. The project was completed in Q4 2020.

The Verona – Barnum Creek Jct. line rebuild is an example of ITC's ongoing commitment to the operational efficiency and reliability of Michigan's high-voltage transmission grid. The company has invested more than \$5 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

The new Verona – Barnum Creek Jct. poles will be similar to the one shown here.

ITC Holdings Corp., through subsidiaries ITC Transmission and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan's Lower Peninsula. As the nation's largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan's transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.
